289-2171

March 14, 1966

MR. CHARLES PAUL, DIRECTOR
CALIFORNIA DEPARTMENT OF AGRICULTURE:

THE HONORABLE BOARD OF SUPERVISORS OF THE
COUNTY OF SANTA CLARA:

AND:

MR. HOWARD W. CAMPEN, COUNTY EXECUTIVE:

Gentlemen:

This 1965 Annual Agricultural Crop Report for the County of Santa Clara, is herewith submitted in accordance with the provision of Section 65.5 of the California Agricultural Code.

The report shows the acreage, production and gross values of the commercial crops and products produced in the County

Also included in this report, as a point of interest, are two data sheets, one showing the "Acreage Trend" of our total bearing and non-bearing acreage of fruit and nut crops from 1950 through 1965, and the other showing the bearing and non-bearing acreage of our major fruit and nut crops for North and South County, using Coyote as the dividing line.

A. C. P. payments are not included in the gross value figures, but are only reported for informational purposes.

I wish to take this opportunity to express my appreciation and to sincerely thank all individuals and organizations who so willingly cooperated with this department in contributing the information necessary for this report.

To all the members of my staff, expressed appreciation is being given for their efforts in the compilation of this report.

Respectfully submitted,

THEODORE J. MONIZ
AGRICULTURAL COMMISSIONER

COUNTY OF SANTA CLARA

COMMENTS ON 1965 CROP PRODUCTION

Apricot growers suffered financially during 1965. Prices for fresh, canned, jam and nectar fruit were depressed. A heavy "cull out" was necessary to meet high quality standards required by processors. It was estimated that 2000 tons of fruit went unharvested due to unfavorable prices. Only dried apricots showed a price increase over 1964.

Cherry production was up over 1964. Lack of rain during pre-harvest and harvest season was favorable to local growers. Better prices and increased production accounted for over 1 million dollars in gross returns. Bird damage continues to plague local orchards.

Santa Clara County growers fared better, production wise than all other pear growing districts in California and the Northwest. Rains during the 1965 bloom period resulted in one half the tonnage on a state wide basis of 1964. Local production was only off approximately 20%. The light crop resulted in peak prices and reflected an over all increase to county growers of more than one million dollars over 1964. Pear Decline continues to be a problem to local growers. Research of this disease is still being carried on at local, state and national levels.

Prune growers again faced an adverse season. Total dried tonnage was down approximately 9,000 tons, a heavier than usual "dry-away" and smaller fruit accounted for the drop. Prices remained depressed. 20% of the crop was assigned to the Reserve Pool for management purposes. It is hoped that as this reserve is returned to the market, prices will be comparable to the 80% "free tonnage".

Quality of walnuts was below average, partially due to difficulties in Walnut Husk Fly control. Prices were down approximately \$75. per ton.

Tomato planting was down, probably due to uncertainty of harvest help. A ten dollar per ton increase over 1964 resulted in over a million dollar increase in this crop. A long harvest season was also favorable. Local labor, mechanical harvesters and a limited number of braceros harvested the crop with very little loss of fruit.

Strawberry acreage continues to drop. A high of 3,500 acres in 1957 has been reduced to a present 300 acres. Prices for berries for processing were good, averaging 16½¢ per pound for 1965.

Neck Rot of onions was moderately prevalent in 1965.

Livestock raisers fared better in 1965. Above normal rainfall resulted in good range conditions. Firmer prices resulted in nearly 1 million dollar gross increase over 1964.

Urbanization and other factors continue to reduce farming acreage in Santa Clara County. Fruit and nut tree acreage alone showed a loss of approximately 2000 acres. Acreage of crops of low value per acre, such as alfalfa and permanent pasture, dropped due to irrigation, pump tax and other costs.
