SAN JOSE, CALIFORNIA 95113

289-2171

March 15, 1968

MR. EARL COKE, DIRECTOR  
CALIFORNIA DEPARTMENT OF AGRICULTURE:

THE HONORABLE BOARD OF SUPERVISORS OF THE  
COUNTY OF SANTA CLARA:

AND

MR. HOWARD W. CAMPEN, COUNTY EXECUTIVE:

Gentlemen:

In accordance with the provisions of Section 2279 of the California Agricultural Code, I am pleased to submit this 1967 Annual Agricultural Crop Report of the acreage, production and valuation of the agricultural crops and products of the County of Santa Clara.

The gross value of the commercial crops and products produced was \$71,978,895, which is an increase of \$376,100 over the year 1966. It must be emphasized that this report reflects a gross return and in no way represents the actual profit to the producer.

A. C. P. payments are not included in the gross value figures, but are only reported for informational purposes.

As a point of interest, also included in this report are three data sheets, one showing crops and products exceeding "One Million" dollars in value, one showing the "Acreage Trend" of our bearing and non-bearing acreage of our major fruit, nut and grape crops, and one showing the acreage of our major fruit, nut and grape crops for North and South County, using Coyote as the dividing line.

I wish to express my sincere appreciation for the cooperation and assistance of all individuals and organizations who so willingly cooperated with this department in contributing the information necessary to make this report possible.

To all the members of my staff, I express my sincere thanks for their diligent efforts in obtaining and compiling the information reflected in this report.

Respectfully submitted,

*Theodore J. Moniz*

## COMMENTS ON 1967 CROP PRODUCTION

Production for most of the deciduous fruit crops in Santa Clara County was greatly reduced because of a very poor fruit set due to the prolonged rainy period during late March and April, while the fruit crops were in bloom. From this report it is quite evident that prune production was not as severely affected as were apples, apricots, cherries and pears. Prune production was up slightly, but a three to one dry-away was experienced along with a larger tonnage of smaller and inferior fruit. Due to lower prices the gross income for prunes decreased from \$10,212,900.00 to \$8,781,500.00, consequently prunes lost its rating in rank as the number one crop in Santa Clara County.

Apple income decreased \$38,100.00, apricot production dropped 12,840 tons below the 34,000 tons for 1966, and the value decreased \$1,541,000.00, cherries dropped from \$3,236,000.00 to \$1,189,000.00. Pear production undoubtedly suffered the greatest loss, decreasing from 57,710 tons to 20,445 tons, and even though pears received one of the highest prices ever paid the value still decreased \$1,417,100.00. Walnut production was lower, but due to higher prices the gross income increased \$285,000.00. Though higher prices were paid for most of the crops the over all gross income returns for all fruits, grapes and nuts decreased \$6,283,700.00. There was also a reduction of 4,123 acres of our major fruit crops, with prunes losing 2,164 acres. Strawberry production and gross value exceeded that of 1966, even though the first crop was damaged and picking hampered by wet weather.

Even though inclement weather severely hampered seeding and planting of many of our vegetable crops, and with approximately 1600 additional acres planted over 1966, the overall total gross value increased from \$13,223,600.00 to \$16,926,300.00, with tomatoes (the number two crop in Santa Clara County), cucumbers and bell peppers showing the largest increases, these three vegetable crops have received a place in the million dollar income category.

Additional new plantings of cut flowers in Santa Clara County continues to increase steadily. Total production area under glass, plastic or fiberglass is 11,267,000 square feet, and there was approximately 155 acres producing outdoor chrysanthemums, asters, gladioli, iris, daisies, statice, strawflowers, sweet peas and other cut flowers.

The total gross income for all cut flowers increased \$2,474,400.00, with chrysanthemums leading all other crops produced in the county in dollar value with a gross income of \$10,021,000.00, and now holds the number one rating in rank as the leading individual gross income crop in the County. Carnations also showed an increase in income of from \$2,494,000.00 to \$3,265,000.00.

With nearly ten (10) inches of rain falling in late March and April, which caused considerable anguish and near disaster for some crops, it nevertheless was beneficial from the standpoint of maintaining our water level. Most of the reservoirs were filled to capacity, and maintained a favorable water level throughout the summer. Pasture and range land benefited tremendously, and generally provided ample range feed for livestock throughout the summer months. Because of the late rains most growers saved from one to two irrigations of their orchards, and the same was true for other crops.
