Positive West Nile Virus Mosquitoes Found in Portions of Milpitas and San Jose

Targeted adult mosquito control treatment scheduled for Wednesday, Aug. 2, in a limited area within Milpitas and San Jose

SANTA CLARA COUNTY, CALIF. – The County of Santa Clara Vector Control District has confirmed the presence of West Nile virus-positive mosquitoes in a small area that includes Milpitas and San Jose (**ZIP codes 95035 and 95134**). Weather permitting, this area will be treated to reduce adult mosquito populations with the use of truck-mounted equipment on **Wednesday, Aug. 2, starting around 10 p.m.** and concluding a few hours later.

The District's mosquito management program largely focuses on preventing mosquitoes from reaching the adult biting stage by proactively targeting immature stages of mosquitoes found in standing water. When a mosquito with West Nile Virus (WNV) is detected, the District takes the added step of conducting adult mosquito control treatments. It is crucial the District conduct mosquito control treatments upon finding a positive mosquito. Any delay in the application could present an immediate and imminent threat to public health and safety, exposing the public to potential injury, or even death, caused by a vector. The adult mosquito control treatments reduce the mosquito population in the area, which decreases the risk of a WNV-human infection.

It is normal to see an increase in West Nile virus during the summer and early fall because mosquitoes thrive in warm weather. The District has a dedicated surveillance program to detect the presence of diseases like West Nile virus, St. Louis encephalitis and western equine encephalitis, all of which are transmitted through the bite of infected mosquitoes. The data collected through surveillance is used to predict locations that are more likely to have these disease-transmitting mosquitoes.

The District has been conducting truck-mounted treatments regularly since 2003 to successfully reduce WNV-transmitting mosquito populations.

Notice is being sent directly to the public in the treatment ZIP codes through [AlertSCC](#) and to those who subscribe to Nextdoor. General notice is provided on social media platforms – including [Facebook](#), [Instagram](#) and [Twitter](#) (@SCCVCD) – and to those subscribed to the District's [mosquito treatment notifications](#).

Vector Control staff will be available to answer any questions from the public, Monday–Friday, on the dedicated West Nile Virus Hotline at **(408) 282-3114**, from 7:30 a.m. to 3:30 p.m. Questions can also be submitted by email to vectorinfo@cep.sccgov.org.

Board of Supervisors: Sylvia Arenas, Cindy Chavez, Otto Lee, Susan Ellenberg, S. Joseph Simitian
County Executive: James R. Williams

The specific details of the operational areas are:

Treatment date: Wednesday, Aug. 2, around 10 p.m., for approximately four hours

Supervisorial Districts: District 3

Cities: Milpitas and San Jose

Centered at: N. Milpitas Boulevard and Homme Way

Bordered by:

- **North** – Dixon Landing Road, Firethorn Street, Buskrik Street, and Levin Street
- **East** – Levin Street, Gross Street, Gosser Street, Greathouse Drive, and Diel Drive
- **South** – Rancho Higuera Road, Garcia Court, Sudbury Drive, Summerwind Drive, and California Circle
- **West** – California Circle and N. McCarthy Boulevard

ZIP Codes affected: 95035 and 95134

Interactive map: <https://arcg.is/1WnijD0>

There is no need to relocate during the treatment. Mosquito treatments pose minimal risk to people, pets, animals and the environment when applied by a licensed vector control professional following label instructions. Those who would like to take extra precautions can keep family and pets inside during the approximately four-hour treatment, with windows and doors shut. By sunrise, the insecticide will quickly break down with the sunlight. Since the District applies insecticides at ultra-low volume (ULV), individuals aren't likely to breathe or touch anything that has enough insecticide on it to be harmful. All control materials utilized in our mosquito control program are approved by the Environmental Protection Agency for use in public areas and are widely used by vector control agencies throughout California.

For more information on the products used for this adult mosquito control treatment, including the safety data sheet, insecticide label and a list of our most frequently asked questions, visit our website at www.sccvector.org. For additional information on adulticides, visit the Centers for Disease Control and Prevention's website at www.cdc.gov. For information on West Nile virus activity in California, go to www.westnile.ca.gov.

Health Effects of West Nile Virus

Since West Nile virus arrived in California in 2003, more than 7,000 people across the state have contracted the disease; nearly 400 of those cases were fatal. In 2022, there were 15 human WNV-related deaths; 2015 was a record year for fatalities in the state with 55 deaths.

WNV infection does not cause symptoms in most people; however, for some individuals it can cause fever, headache, body aches and, in severe cases, significant neurological damage or death. Individuals with certain chronic medical conditions (such as diabetes, high blood pressure, cancer and kidney disease) and the elderly are most at risk for serious complications.

Board of Supervisors: Sylvia Arenas, Cindy Chavez, Otto Lee, Susan Ellenberg, S. Joseph Simitian
County Executive: James R. Williams

The public can assist in preventing the spread of West Nile virus by taking the following prevention measures.

On your property:

- Inspect for standing water on a weekly basis.
- Drain or turn over anything that can hold water, such as flowerpots, planter bases, pet dishes, buckets and old tires.
- Clean items like bird baths and pet bowls once a week to remove mosquito eggs.
- Clear debris from rain gutters on a regular basis to allow water to flow.
- Properly screen [rain barrels](#), cisterns and [irrigation drains](#) to prevent mosquito access.
- Fix leaky water faucets and broken sprinkler heads and avoid [overwatering](#) lawns and plants.
- Ensure window and door screens are in good condition with no holes or tears and are tight-fitting.
- Ensure swimming pool water level is adequate for proper circulation and filtration.
- Free mosquitofish can be requested online at www.sccvector.org for placement in neglected pools/spas, ornamental ponds, water troughs and other artificial bodies of water. For more information on our mosquitofish program, visit www.sccvector.org/mosquitofish.

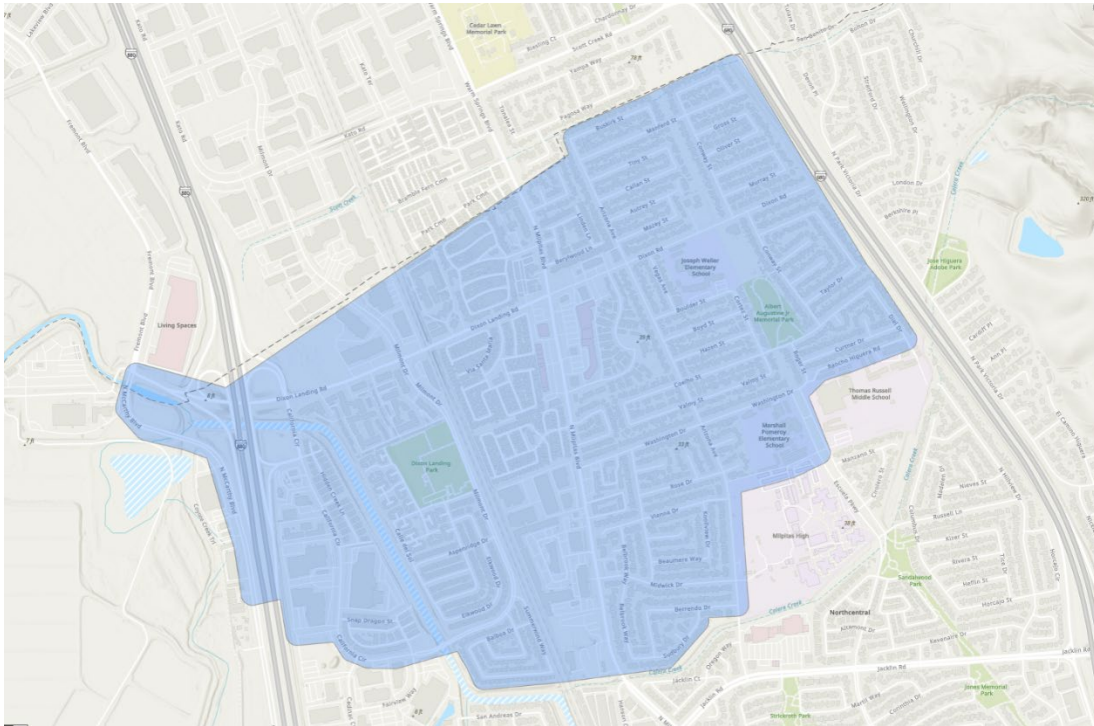

Outdoor Activities:

- Limit outdoor activities during dusk and dawn – these are the times when the mosquitoes that transmit WNV are most active.
- If spending time outdoors, dress in long-sleeve shirts and long pants, preferably in light colors – mosquitoes are mostly attracted to dark colors.
- Apply [insect repellent](#) that contains DEET, IR3535, or Oil of Lemon Eucalyptus, always following label instructions.

Contact the County of Santa Clara Vector Control District if you are being bothered by mosquitoes or know of a potential mosquito-breeding source. For free assistance with mosquito control or other vectors, residents can contact the District office at (408) 918-4770 or submit an [online service request](#).

ADULT MOSQUITO CONTROL TREATMENT
