The file format is Windows ANSI, tab delimited, CR-LF terminated records. The first row contains column field names.

If the optional voter history file is requested, the history data for five or fewer specific election dates will be included in the same voter file; for all available vote history data will be placed in a separate file.

The "IVoterUniqueID" field is common to both of the data files and can be used for linking the profiling data to the history data for each individual voter.
